# Streamline Station Deployment and Activation with AI-Powered Installer Tools

The ChargePoint® Platform now features a powerful new Activation Wizard and an AI-powered Installer Toolkit to get charging stations online faster and more reliably. By automating key steps and providing tailored real-time support, you can significantly reduce the time and effort required to activate charging stations, ensuring smoother, more efficient deployments from the beginning.
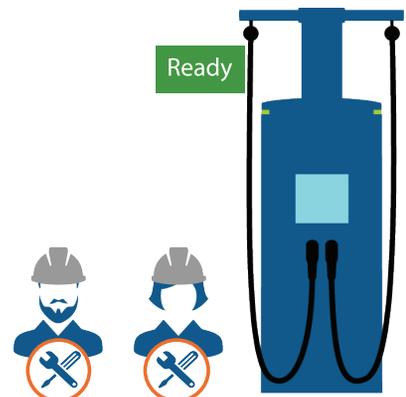

First-time-right installation:

The Installer Toolkit AI chatbot provides immediate natural language support, helping installers work efficiently and confidently so they can move on to the next job.

Time savings:

The Activation Wizard automates manual tasks, cutting down steps by up to 70% for single-station and 95% for multi-station deployments.

Reliable, replicable results:

Automating key steps and providing smart recommendations ensures that chargers are activated correctly, improving uptime and avoiding costly return trips for installers.

How it works

- Pre-assign stations to an organization before activation to streamline the process for your deployment teams.

- A simplified 3-step wizard automates manual tasks like station naming, radio group creation, time zone, and station UI selection.

- Built-in energy management setup provides the option to configure energy management settings during the activation process.

- Cloud plan and usage category-driven policy recommendations offer suggestions to ensure that settings are tailored to your business needs.

Let's get started

We're always here to help you identify your charging goals, advise on the best approach and help evaluate your site.
