

Optimize Costs and Power with Intelligent Energy Management

The ChargePoint® Platform has Energy Management features that help you save on electricity and provide greater control over how energy is consumed throughout your charging operation. By ensuring you stay within your site's electrical limits and energy tariff constraints, these intelligent tools save you significant upfront and operating expenses, while also allowing you to manage your site the way you want.

Save money on upgrades:

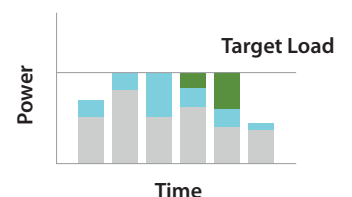

Energy Management allows you to install more chargers on your site without expensive and time-consuming electrical infrastructure upgrades.

Reduce peak demand:

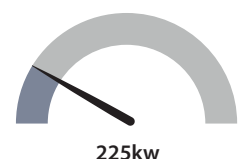

By helping you cut the power you use at peak demand times, Energy Management can reduce charges by 30-70%, leading to significant recurring cost savings each month.

Ensure operational readiness:

As a critical component of our fleet solution, Energy Management guarantees that vehicles are charged when needed, while complying with grid stability standards.

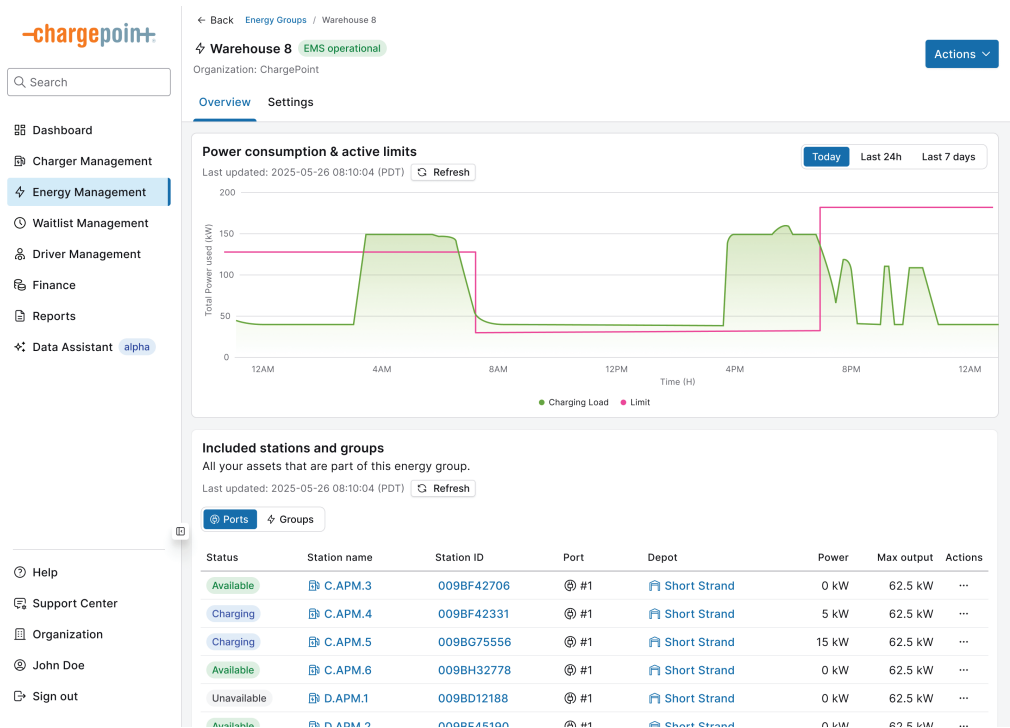

Real-time power

What's new

A better user interface and a simpler, more intuitive setup wizard make it easier than ever to configure your energy management settings.

Let's get started

We're always here to help you identify your charging goals, advise on the best approach and help evaluate your site.
