

Organize and Optimize Your Charging Operation with Sites and Custom Groups

The ChargePoint® Platform features useful features to help you group your stations and manage them with greater visibility and control. By enabling you to organize stations into logical Sites* and Custom Groups, the platform simplifies station management, allowing for granular configuration and reporting across your entire charging infrastructure, whether you have many stations or just a few.

Simplify Station Management:

Sites provide a clear, hierarchical structure for your network, making it easier to manage stations across multiple physical locations.

Enable Granular Control:

You can now configure and report on specific Sites or Custom Groups, allowing you to tailor operations to different use cases like AC vs. DC or public vs. private charging.

Improve Operational Efficiency:

The new structure provides the clarity you need to streamline operations and ensure each group of stations is configured to its specific business purpose.

Simplify Station Management

What's new

We've introduced **Sites** as a **core location-based grouping feature** for your stations, providing a clearer hierarchy that makes it simpler to manage your network.

A clearer user experience for **site and group hierarchy** makes managing stations across different use cases more intuitive.

Sites and groups

A site is a group structure used to organize stations by their actual location, while a custom group is a flexible grouping you create to organize stations for actions like reporting or tagging. [Learn more](#)
