

CPF32 Family

ChargePoint® Fast Charging Stations

The CPF32 family brings ease of use, convenience, safety and reliability.

Our CPF32 family of charging stations is designed for behind-the-fence fleet applications. For fleets, CPF32 stations are ideally suited for depot charging.

All CPF32 models are rated for 7.4 kW and are capable of charging some EVs in less than four hours. The stations come with a standard Type 2 connector that can charge any EV on the road with a Type 2 outlet.

Intelligent energy management capabilities can lower both installation and energy costs. Capabilities such as scheduled charging can reduce monthly operating costs, and panel sharing can help you charge more cars while avoiding expensive electrical upgrades.

The CPF32 charges efficiently and conserves power when not charging. On average, the CPF32 uses 40% less energy than a standard EV charger when in standby mode to help you save money on your utilities bill.

Stations are available in wall and pedestal-mounted configurations with a 5.5 m cable length. You can keep cables off the ground and avoid trip hazards with our self-retracting, maintenance-free cable management system.

Maximise the Benefits of EV Charging with Smart, Networked Stations

- + Receive automatic software updates that continuously deliver new improvements and features
- + Remotely monitor, manage and configure stations from a single ChargePoint login
- + Get real-time information on station availability
- + Get detailed reports on energy usage, fuel savings, greenhouse gases avoided and more
- + Manage access to approved driver(s)/vehicle(s) with RFID card reader

Service Products and Support

ChargePoint offers world-class service products and support for your drivers, station owners and charging stations.

- + Driver phone support
- + Dedicated station owner support
- + The most comprehensive EV station maintenance and management in the industry

When Charging is Mission-Critical, Protect Your Investment with ChargePoint Assure

- + **Minimise downtime:** ChargePoint Assure provides the most comprehensive EV Station maintenance and management in the industry
- + **Get up and running quickly and flawlessly:** Professional guidance for station configuration saves you time, and unlimited changes to station policies flexibly supports your business
- + **Eliminate unexpected future expenses:** Cost for parts and on-site labour for installation is covered for all Assure-eligible repairs
- + **One less thing to worry about:** Proactive station monitoring provides you with regular reporting
- + **Reduced risk of downtime:** We guarantee 98% annual uptime and one business day response to requests

Minimise Costs with Energy Management

Our flexible energy management options can help lower your installation and energy costs while providing an optimal charging experience.

Scheduled Charging and Demand Response

- + Allows you to plug in vehicles and schedule stations to start charging during off-peak hours when electricity rates are lowest
- + Reduces monthly electricity costs by shifting EV charging to off-peak hours and avoiding demand charges
- + Load shed by percentage of active load or to fixed power output

Panel Sharing

- + Allows you to charge more EVs without costly electrical upgrades
- + Intelligently and dynamically distributes power output to all EVs that are plugged in

Power Sharing

- + Allows dynamic sharing of one 32A circuit between two parking spaces
