

ChargePoint Fleet Electrification

Lower your TCO and maximise uptime

Electrifying your fleet is the most critical decision for modern operational efficiency. Discover how our comprehensive solution drastically lowers your total cost of ownership (TCO) and ensures maximum fleet availability.

Why go electric with ChargePoint®?

Meaningful cost savings

Realise substantial savings through dramatically lower costs compared to fossil fuels, combined with reduced maintenance needs from inherently more reliable EV technology and streamlined operational management.

Unmatched flexibility & scalability

Our software integrates seamlessly with your existing operations, supporting third party telematics systems and allowing you to operate the hardware of your choice. Scale your infrastructure at your pace, knowing your software will adapt to your evolving needs.

Unrivalled reliability

Our stations are built to last and backed by powerful software intelligence. Benefit from proactive monitoring that detects issues before they impact operations. Our dedicated Assure® support plans ensure response and service, getting you back to operational capacity fast.

“As a full-service provider in the field of electric mobility, we have found a great partner in ChargePoint. Thanks to the hardware-independent and scalable software solution and the large roaming network behind it, we can find the right solution for every customer.”

— Alois Wach
Managing Director, da emobil

Your comprehensive solution for fleet operations

Integrated charging hardware

High-power DC fast chargers and robust level 2 stations are designed for rigorous fleet use.

Intelligent CMS software

The ChargePoint Platform provides the control and visibility fleets need to manage complex charging logistics.

Dedicated support services

24/7 driver support, consulting & deployment services and more to keep your programme running.
