

# Installing the Power Share Kit

## IMPORTANT !

Please note which CPF25 stations (as identified on the activation label) are sharing a circuit. The information on the activation labels, in addition to the breaker panel ID and breaker number, **MUST** be provided during the activation process (see the Post-Installation Checklist on page 5-3 of the CPF25 Installation Guide).

Use the contents of the Power Share kit to connect a dual port charging station to a single circuit.

## Kit Contents

If you ordered a power sharing kit, you will receive:

- Junction Box (1)
- Cover (1)
- 1/4" Self-Tapping Screws to attach junction box to pedestal (2)
- Screws to attach cover (2)
- Wire Nuts (2)
- Installation Instructions (repeated below)

### **DANGER: RISK OF SHOCK**

**Turn off circuit breaker.**  
Do not restore power until installation is complete.  
Failure to follow these instructions could result in shock or electrocution.

## Install the Power Share Kit

1. Using the two supplied screws, attach the junction box to the CPF25's pedestal, as shown.
1. Run the L1 and L2 service wires into the hole in the bottom of the junction box.

**NOTE:** Maximum wire size is 6AWG.

1. Twist two 10-gauge wires (approximately 18" long) onto each of the service wires and secure using wire nuts.
1. Route a 10-gauge wire to each of the charging stations.
1. Attach the cover to the junction box by hand-tightening the two supplied screws.
