

# What is ChargePoint?

Safe, convenient and easy-to-use, public and private charging stations.

ChargePoint is an electric vehicle (EV) charging network spanning Australia and New Zealand. We provide safe, convenient and easy-to-use, public and private charging stations for all EV drivers. ChargePoint stations come in several models, designed to cater for a range of charging requirements and are available for domestic, business and fleet operations.

## Electric Vehicles

Many of the major Motor Vehicle manufacturers already sell or are in the process of bringing EVs to Australia and New Zealand. As petrol prices continue to rise and environmental concerns about internal combustion vehicles increases, many people are considering EVs as a cost effective and carbon friendly method of transport.

## Benefits of driving an Electric Vehicle

Electric vehicles are ideal for the average person's daily driving requirements. As EVs have fewer moving parts than petrol or diesel cars, they use their energy more efficiently - helping to bring down the costs of vehicle transportation.

On a unit to unit basis, electricity is a lot cheaper than petrol or diesel and, in addition, EVs are much better for the environment.

Approximate running cost comparison

	Approximate cost per 100km
Internal Combustion Engine (ICE)	\$10.00
Electricity	\$2.50

Electric Vehicles use energy more efficiently

## Charging with ChargePoint

### Drivers

---

ChargePoint operates a network of public stations that are accessible to all EV drivers. With new stations being installed on a regular basis, a complete list of all public charging locations and availability can be accessed live on the ChargePoint portal ([www.chargepoint.net.au](http://www.chargepoint.net.au)). You can also download the ChargePoint Mobile App – available on iPhone and Android devices, to view station listings, find the most convenient locations near you, and even reserve a charging session.

### To Start Charging

---

- + STEP 1  
**AUTHORISATION**  
To use a ChargePoint station simply swipe your ChargePoint Card over the card reader symbol, start a session with the ChargePoint Mobile App, or phone ChargePoint's 24-hour Customer Service Centre.
- + STEP 2  
**CONNECT**  
Upon authorisation, remove the charging connector by pressing down on the button at the top of the handle and pulling the connector from its holster.
- + STEP 3  
**CHARGING**  
Plug the connector into the vehicle. The station's LED display will indicate the vehicle is charging.

### Recharge Costs

---

When using public stations, registered drivers use a ChargePoint Card that enables you to access and pay for your charging activity where necessary. Payment services are managed through the ChargePoint Driver Portal where you can top up your account.

Many public stations on the ChargePoint network are currently free to use. Where charges apply, they can be viewed on the ChargePoint portal or via the ChargePoint Mobile App, providing you with recharge rates for every public station on the network.

No upfront membership costs  
or ongoing fees.

## ChargePoint Stations

We have a range of stations designed for homes, offices and public locations. Through our partnership with Visionstream, we can install, service and maintain a ChargePoint station anywhere in Australia, and have the experience and capability to tailor a charging solution for individual and business needs.

### Intelligent Networked Stations

---

All stations are in constant communication with the ChargePoint Network through a private and secure telecommunications connection. This allows us to monitor the operational health of every station 24 hours a day, and provide a full suite of data and information to drivers and station managers.

### Station Safety

---

ChargePoint stations have inbuilt safety features and protocols to protect users at all times. The stations are designed to respond to a range of charging event notifications, and include ground fault and over current detection, to isolate power and report an incident. In the event of a fault, stations automatically shut down and our 24 hour service centre is ready to assist.

Tailored charging solutions  
for individual and business needs,  
for home, office or public use

diagnostic safety monitoring

## ChargePoint Online Portal

### On the Road

---

The ChargePoint Portal and ChargePoint Mobile App make it easy to stay informed about public charging stations. Using the Portal and App you can:

- + Obtain directions to any ChargePoint station, from your current location.
- + Reserve a charging session at selected stations prior to your arrival.
- + Stay up to date with your EV charging status at all times.
- + Top up the credit on your ChargePoint Card.
- + View your current and previous charging sessions and track your energy usage.

### Station Management and Visibility

---

ChargePoint's cloud based service plans make it easy to manage and maintain electric vehicle charging services.

#### + Businesses

- Set pricing and develop a revenue stream for charging services.
- Become a part of the ChargePoint network, ensuring your stations are actively promoted through ChargePoint and our partners.
- Control access to outlets.
- Monitor vehicle charging activity at all times of the day and receive real-time notification.
- Capture valuable recharging data for reporting and accounting.

#### + Fleets

- Combine charging hardware and software to suit your fleet requirements.
- Maps and clear colour coding provides a view, status and location of vehicles currently charging at a ChargePoint station.
- Fleet summary alert: elect to receive daily SMS and/or emails summarising charging status for fleet vehicle or an alert when a charging fault occurs.
- Usage Reports: remotely track energy usage, greenhouse gas and fuel efficiency, by fleet, department, vehicle and driver, by day, week, month and year.

## Why ChargePoint?

### + Cost effective

ChargePoint station managers only pay for the energy used, charging electric vehicles at a fraction of the cost of petrol.

### + Fast

All ChargePoint stations recharge electric vehicles faster than a standard power socket commonly found in homes and workplaces.

### + User-friendly

All ChargePoint stations include a fixed cable and connector; compatible with all electric vehicles, working on a simple set, connect and go principle.

### + Smart and Connected

ChargePoint outlets include data collection and wireless communication to help users locate, operate, stay up-to-date with charging sessions, and even reserve a station. With iPhone and Android Apps available, drivers can maintain control of their charging activities at all times.

### + Open Access

Drivers don't pay a subscription fee to become network members and don't have to carry around a separate charging cable. All ChargePoint public stations can be accessed by any driver using a ChargePoint card, the ChargePoint Mobile App or via ChargePoint's 24/7 customer service centre.

### + Safe

All ChargePoint stations are monitored 24 hours a day and have inbuilt safety features and protocols to protect users at all times.

### + Environmentally friendly

Chargepoint stations allow motorists to power their driving with electricity, not fossil fuels, to help fight climate change. Driving an EV can cut fossil fuel emissions in half, or get rid of them entirely when renewable energy sources are used.
